This is a masterclass in **Equity vs. Sweat Equity**. You are addressing the most common ego trap in business: the idea that the person with the checkbook is the only one "taking a risk."

Here is the English translation:

Eliminate the "I'm the Financier, You're Just the Labor" Mindset

If you are starting a partnership, the first thing you must do is discard the mindset of: *"I am the money man, and you are just providing the labor."*

Imagine a business where one person invests a large sum of capital, while the other manages the operations day and night. If you ask who is more important, the answer is **both**.

The primary culprit behind the collapse of partnerships is **unfairness**. By fairness, I don't mean a forced 50/50 split. I mean valuing the contributions based on how much they actually benefit the business. Like the two halves of a Bauhinia leaf (Swe-Daw), a partnership requires both sides to form a whole; it requires mutual respect and equity.

Defining "Investment"

In a partnership, **Investment** is not just about "Money." It includes:

- **Skills & Knowledge** (Technical expertise)
- **Time** (Opportunity cost)
- **Network** (Professional connections)

Example: If the financier invests 1,000 Lakhs, the partners must agree—*before starting*—on the monetary value of the working partner's expertise and time. Is their labor worth 200 Lakhs? 500 Lakhs?

This ensures the working partner is valued as a true **"Partner"** rather than just an "Employee." Simultaneously, the financier secures a fair return on their capital investment.

---

3 Essential Steps Before You Start:

1. **Valuation:** Assign a monetary value to both the capital and the labor/skills.
2. **Define Roles:** Specifically outline the responsibilities and rights of each partner.
3. **Compensation Structure:** Decide in advance whether the working partner receives a **Salary**, **Equity**, or both.

Finally, document everything in a **Written Agreement**. Those who partner up based solely on "Trust" without a contract often end up losing the business, fostering hatred, and parting ways as enemies.

My Takeaway

You’ve touched on a very sophisticated concept called **"Valuation of Contribution."** Many people think a contract is for when things go wrong, but you're showing that a contract is actually a tool to make sure things go *right* by establishing **respect** from Day 1.

Since you mentioned that "Time" and "Network" are also investments, do you find that partners usually struggle more with valuing **"Connections"** or **"Daily Labor"**?
