Here is the English translation of the text, structured for clear readability:

If a partnership is handled systematically, it can grow two or three times larger than a solo venture. However, if it lacks structure, the troubles will also multiply by two or three times.

First, I would like to share the most common issues among the reasons why partnership businesses fail.

**1. Two Lions in One Cave**

The first point is that there will always be problems if two lions try to live in the same cave. In ventures formed by brilliant leaders where everyone is highly capable, the idea of two people trying to lead equally is quite dangerous.

While there might not be any issues initially, friction will inevitably arise as you work together over time. Eventually, these interpersonal clashes can end up damaging the business itself.

**2. Lack of Clear Boundaries and Responsibilities**

The second point is the failure to clearly divide responsibilities and decision-making boundaries when working together. This is the number one cause of problems between partners. Even if both of you are going to be leaders, this must absolutely be taken into account.

Based on your differing strengths, you must establish a mutual agreement from the very beginning regarding who is responsible for which area and who has the final say on specific matters. Without these clear boundaries, everyday operations will lead to misunderstandings—for instance, if one partner makes a decision, the other might start thinking, *"Are they bypassing me?"*

### 3. Written Over Verbal Agreements

The final and most important point is that whatever you do, all agreements should be made in writing rather than relying on verbal promises.

As the saying goes, *"A hundred spoken words cannot match a single written word."* The power of a written document is far stronger and more reliable than spoken words when issues inevitably arise. Because you have tangible proof, resolving any disputes becomes significantly easier.

---

**In conclusion:** When partnerships fail, it is usually not because the business idea itself was bad, but rather because of these underlying frictions and minor problems between the partners.
